ABSTRACT
Bluetooth has been regarded as a new wave in the IT sector from the day of its origin. Blue tooth is continuing its success story. Toshiba introduced blue tooth in September 2000 to consumers for $ 199. The new technology is supported by SIG (Special Interest Group). SIG founded in 1998 consists of 2000 members who have access to the Blue tooth specifications (information needed to make a blue tooth product). The SIG works to promote the Blue tooth technology and consists of members like IBM, Intel, Microsoft, and Nokia. The technology represents an opportunity for the industry to deliver wireless solutions that are ubiquitous across a broad range of devices.
