Abstract

A (p, q) connected graph is edge-odd graceful graph if there exists an injective map $f: E(G) \rightarrow \{1, 3, \ldots, 2q-1\}$ so that induced map $f^+: V(G) \rightarrow \{0, 1, 2, 3, \ldots, (2k-1)\}$ defined by $f^+(x) \equiv f(x, y) \pmod{2k}$, where the vertex $x$ is incident with other vertex $y$ and $k = \max\{p, q\}$ makes all the edges distinct.
