Many OCR systems were developed for different foreign languages, and efforts on Indian script recognition remain vital. Due to the varying writing style of each individual, OCR becomes a critical challenge since the last few decades. India is known to the world for its unity in diversity. The geographical and cultural vastness of the country has various spoken languages and writing scripts that were invented and utilized for daily communication. Courageous endeavors were made towards OCR for various Indian scripts. The development of OCR systems was considered an active area of research due to the complexity and structure of Indian scripts. MODI Script was an ancient script of India compared to other Indian scripts. A large number of historical documents exist and need to be preserved and explored; therefore, special attention must be given to MODI script. This research paper is an attempt towards an investigation of recent advances in automatic handwritten MODI script recognition.
Review on Recent Advances in Automatic Handwritten MODI Script Recognition

advances in Handwritten Optical Character Recognition system for MODI script.
