Abstract

In today’s world Travel and Tourism agencies are growing day by day as the Tourist’s are increasing their part in traveling and visiting the different places. The main issue behind the this is the budget and the package selection in the travel and tourism industry because every agency think as if they are best compared to others, so to overcome such problems there must be a system that provides packages for the customer. The main objective of this project is to provide a suitable package to customer from different travel agencies by comparing packages provided by the agency’s to the customer.
