Abstract

Enterprise Resource Planning (ERP) is an important tool for various enterprises and organizations supporting and managing business and making decision. The technology foundation of ERP is based on information techniques. The theory base includes application management theory, system theory, mathematic, computer science and information science. ERP is the information system which combines with advanced management thoughts, methods and instruments. Only if modern management theories and methods integrate into ERP, it can play an important role in management and help enterprises make decisions[2]. This article focuses on the teaching mode of ERP (Enterprise resource planning) course in colleges and universities. It recommends an innovative three dimensional teaching mode, composed of three main parts. The new experimental arrangement is good to improve the students’ practical ability, innovation and teamwork ability. It changes the ERP course from
Reflection and Exploration of Interactive ERP Teaching in Colleges and Universities

“teaching” to “learning[1].
