Abstract

Election commission of India has marked with many significant changes in the recent time and it is considered to be one of the most responsible organizations. In such a big democratic country like India it is expected to adopt the latest technological options which improves the performance of voting and there of to achieve 100% polling in India by avoiding unauthorized users to cast voting.

In this paper we have given the solution for most of the problems we are facing in to days vote casting system. It will be very useful for Election Commission of India for its future enhancement.
The pictorial representation of our proposal and its process were explained. The merits and demerits of the existing and proposed system were discussed.
