A (p, q) connected graph is edge-odd graceful graph if there exists an injective map \( f : E(G) \rightarrow \{1, 3, 5, \ldots, 2q-1\} \) so that induced map \( f^+ : V(G) \rightarrow \{0, 1, 2, 3, \ldots, (2k-1)\} \) defined by \( f^+(x) = f(xy) \pmod{2k} \), where the vertex \( x \) is incident with other vertex \( y \) and \( k = \max\{p, q\} \) makes all the edges distinct and odd. In this article, the edge-odd gracefulness of \( (P_2 \uplus P_n) \uplus P_n \) [\( n \) copies of doors]
Graph of Cartesian Product of Sm and Sn "; The Global Journal of Pure and Applied Mathematics of Mathematical Sciences, 1, No-2 (July-Dec 2008b), 117-120.
