Abstract

Users in today’s world are on the move and they are using mobile application platforms to get there. Whether they use mobile phones, tablets, or other mobile devices they have all the information they need. That’s why mobile apps are so much important in today’s market. Android is now the most commonly used mobile operating system in the world. Android now has more users, more phones and more tablets worldwide than any other mobile operating system.

This paper gives a complete knowledge of how to start working on Android Studio and develop an application and get it run on emulator.
