Abstract

We will address in this search for an important issue in the field of the computer world, which has grown a tremendous way in the late twentieth century and become the defining feature more diverse and complicated at the same time, known as the software development life cycle which is about five models they waterfall model and Incremental model-shaped v model Spiral and RAD model and we will address the advantages and disadvantages of each model, the main objective of this research is the representation of the different models of software development work and compare
