Abstract

Feature selection plays a significant role in improving the performance of the machine learning algorithms in terms of reducing the time to build the learning model and increasing the accuracy in the learning process. Therefore, the researchers pay more attention on the feature selection to enhance the performance of the machine learning algorithms. Identifying the suitable feature selection method is very essential for a given machine learning task with high-dimensional data. Hence, it is required to conduct the study on the various feature selection methods for the research community especially dedicated to develop the suitable feature selection method for enhancing the performance of the machine learning tasks on high-dimensional data. In order to fulfill this objective, this paper devotes the complete literature review on the various feature selection methods for high-dimensional data.

Literature Review on Feature Selection Methods for High-Dimensional Data

machine’ Proceedings of Geoinformatics and Joint Conference on GIS and Built Environment: Classification of Remote Sensing Images, pp. 71471J-71471J.

Analysis and Machine Intelligence, vol. 27, no.8, pp.1226-1238.

pp.2383-2392.
