Abstract

In this difference equation, Stability, Periodicity, boundedness, global Stability.

We investigate some qualitative behavior of the solutions of the difference equation \( x_{n+1} = \frac{x_n}{a + bx_n + cx_{n-1}} \) where the initial conditions \( x_0, x_1 \) are arbitrary positive real numbers such that \( x_{n+1} \) where \( a \) and \( b \) are positive constants.
