Let $G$ be an IFG. Then $D$ is said to be a strong (weak) dominating set if every vertex is strongly (weakly) dominated by some vertex in $D$. We denote the strong (weak) intuitionistic fuzzy dominating set by sid-set (wid-set). The minimum vertex cardinality over all the sid-set (wid-set) is called the strong (weak) dominating number of an IFG and is denoted by $\gamma_s(G)$.

In this paper, we introduce the strong (weak) domination in intuitionistic fuzzy graphs and obtain some bounds in IFG.
