Abstract

It is necessary to digitalize the Government for making India corruption free with the help of information and communication technology (ICT) along with internet to achieve better government system by providing public services and processing internal works in suitable, cost effective and customer leaning manner. E-police system is also an e-government related services which makes the communication process between public and police more efficient. Though e-police system is not a new thing in developed countries, but it is new for developing countries like India. Our system will definitely help to solve some issues which are currently faced by vehicle owners and towing agents.
