Abstract

Now a days data mining technique used in the field of medical diagnose of critical diseases and clinical data. the prediction of mining technique is major issue. For the enhancement of mining technique used various approach such as fuzzy logic, feature optimization and machine learning based classification technique. in this paper proposed RBF model baed classification technique for the prediction of cilinical data. the prediction rate of data is good in compression of pervious methods. For the validation and vfication of proposed model used MATLAB software and very reputed dataet such as blood cancer, stomach.
