Management information systems and their impact on job performance among employees in the private sector: Telecommunications companies

Abstract

This study aimed to identify the impact of management information systems on job performance among employees in the private sector. The study was conducted from 2015/2016, and the researcher's random sample consisted of 50 workers at Saudi telecommunications companies. The study concluded that there is a trace of MIS on performance, and the study recommends developing and enacting laws and regulations to contribute to the effective use of management information systems at Saudi telecom companies.
