Abstract

Online Social Rating Networks such as Epinions and Flixter, allow users to form handful constructive social networks, through their daily routine like recommending on the corresponding products, or similarly co-rating products. The preponderance of preceding work in Rating prognosis and Recommendation of products mainly takes into account ratings of users on products. However, in Social Rating Networks users can also construct their precise social network by reckoning each other as friends. In this paper, a perusal of different techniques for product prediction is generated.
