Abstract

In this paper, double wavelet series of a signal $f$ of two variables $t_1$ and $t_2$ using Haar Scaling function $\Phi(t_{1, t_2}) = \phi(t_1, t_2) = \phi(t_1) \phi(t_2)$ and Haar Wavelet function $\Psi(t_{1, t_2}) = \psi(t_1, t_2)$ are studied and discussed.
has been introduced and it has been verified by a number of examples. Several properties of this signal and its image have been studied. The significant result of this paper are the decomposition and reconstruction of signals of a single variable \( t \)
and signals of two variables \( t \)
and \( t \)
using Haar Scaling signal as well as Haar Wavelets.
