Abstract

Excessive use of Internet has transformed the way business activities are conducted as consequences consumer trustworthiness and consumer satisfaction got a new urge. Some researchers have proved that consumer’s satisfaction can solely be achieved by usability. Moreover, It is also suggested that usability can be beneficial to improve trust levels because the ease of use of a system extends more understanding and a greater capacity to infer how the system will act. Thus, usability may improve trust levels as well. This research study focuses on the aspects that influence the customer trustworthiness for a website. 5 hypotheses are designed and a research survey is conducted to test the hypothesis.
