Abstract

This paper focuses on a platform through which user can manage the housing society by a web system which is cloud based and make current situations of society more simple and efficient. Nowadays there is a plethora of societies in every city. Society management system provide facilities like property tracker, online maintenance payment, notification system, expense tracking, annual report generation etc. By using this system members can connect with each other based on their interest group. Software is cloud based so that it can be modified easily as per the society's requirements. This system is able to support many users without any maintenance from the developer.
