Abstract

This system is developed for Faculty of Communication, Visual Art and Computing, FCVAC, Universiti Selangor (UNISEL). The purpose of this system is to track the projector real time location. This system also will help to increase the effectiveness of tracking process. Other than that, this system is develop for track projector current location in a short period by using RFID technology which stand for Radio Frequency Identification. RFID enables radio detection and recognition of an objects associated with a unique ID number code carried by the RFID tag. This system is used by FCVAC Admin. Admin staff can add projector, remove projector and track last location of projector. All the tracking details will be recorded in log. Admin staff can view the log.
