Abstract

Cloud computing has become an adaptable technology in many organization. It represents an important changes in the way information technology is used. Moreover most of the education institutions in the world have become extremely reliant on IT. Universities can take the benefits of cloud based application provided by different services provider and facilitates their The main aim of this research is to design a cloud based architecture to able to share educational resource in Ethiopian higher education institutions.

This study proposes Hybrid cloud platform architecture for sharing of educational resources in the Higher education institutions. For the designed architecture a prototype system was implemented using Microsoft window azure platform. The prototype is very interactive and user friendly which have resource sharing and accessing portal. The developed prototype system was validated using 20 respondents in three higher education staff members and the result is presented in tabular and pie chart form.
