Abstract

Email is a method of official communication in business giants, hospitals, lawyers, Small firms, banks, IT companies and much more. There are lots of emails in an inbox, few are important and more of them are unimportant, by which important mails get skipped many a time. So, our task is to provide a reminder to the users on their emails by which they can be reminded automatically at a specific date. Email Reminder provides flexibility to busy people who are not able to remember all our daily emails. So, this system also helps in the reminder of time-sensitive emails such as form filling mails, exam related mails, etc. And so, it becomes a perfect tool for business and personal follow-ups and also for the new generation who have not time to remember the things and living their lives in running mode.
