Abstract

Necessity for a Productive software has been culminating and Object-Oriented Design
technique is providing solution to this as it is the most powerful mechanism for developing
proficient software systems. It is helpful not only in declining the cost but also in the
development of high quality software systems. Software developers require accurate metrics for
developing efficient software system. Object-Oriented Metrics plays a significant role pertaining
to this aspect because of their importance in the development of successful software
applications. In this paper Assessment of the current state of the art in Metrics and
Object-Oriented Software System Quality is done. Further it contains short descriptive
taxonomy of the Object-Oriented Design and Metrics.
