In the current era of wireless network, popularity of MANET is increasing at a very fast pace. Reason for this increased attention is the wide range of multimedia applications running in an infrastructure less environment. Because of the infrastructure less environment, limited power and dynamic topology it becomes very difficult to provide a secure environment in MANET. In this paper we are providing a detailed survey of different kind of attacks and proposed solutions for handling those attacks. This paper also gives a brief comparison of various protocols available for secured routing in MANET.
A Comparative study for Secure Routing in MANET
