Abstract

In this paper we introduce a new class of sets called \((1, 2)^*\)-\(\text{?gb}\)-closed sets and a new class of generalized functions called \((1, 2)^*\)-\(\text{?gb}\)- continuous maps and \((1, 2)^*\)-\(\text{?gb}\)- irresolute maps in bitopological spaces. Also we obtain basic properties of \((1, 2)^*\)-\(\text{?gb}\)-closed sets. Further, we introduce a new space called \((1, 2)^*\)- \(\text{?gb}\)-space.
