Abstract

Today, Internet is the most important part of human life but growth of internet is major problem of internet user due to internet downloading speed, quality of downloaded web pages and find out the relevant content in the millions number of web pages. Nowadays, internet offering the various services such as business, studies material, ecommerce and search engine on the internet. Due to it is increase the number of web pages in internet. In this paper we are solve the internet related problem by the help of search engine and improve the Quality of downloaded web pages for internet etc. Search Engine is find out the relevant content for the World Wide Web. We have solve other problem of search engine by the help of web crawler and proposed a working architecture of web crawler. Solve the problem of web crawler by the parallel web crawler.
