

International Journal of Computer Applications (IJCA) Journal invites Contribution for SPECIAL ISSUE "Recent Advancements on Mobile Ad Hoc Networks (MANETs)"

**Guest Editor: Kamaljit I. Lakhtaria**

**AIM of Special Issue**

Minimal configuration and quick deployment of mobile ad hoc networks suitable for many application, considering increasing application and lot more research work going upwards in this area. The presence of a dynamic and adaptive routing protocol will enable ad hoc networks to be formed quickly. Such a network consists of many small nodes with sensing, computing, communicating, and control capabilities.

MANET covers a wide audience of Researcher, Students, and Research Laboratories; observing MANET Application, Security challenges, Performance and many parameters. This special issue aims to summarize the latest development of MANET as well as deployment experiences.
