Abstract

The main aim of our project is to keep check on the intruders by identifying their face from the still image or image sequence and matching them with the data stored in our database. As now

a days there are many incidents of intruders getting into a highly restricted area and becoming a threat to the nation. Our project focuses on solving this problem and making it easy for the concerned persons to catch hold of them. Our project aims to detect the faces from the live videos at the same point so as to increase the surveillance power of our nation.
