Abstract
Internet has become an amazing potential for learning, entertainment and socializing gizmo. It has encouraged teenagers and children to participate and express themselves for extraordinary source of information and self-improvement. Understanding the responsibility that comes with technology is a key to safety. The study is useful because it enabled contrast between the views of children and the parents with regard to online risks and threats. Therefore, a literature review has been simplified and produced a proposed scope of this field which covers the benefits, risks and issues of on internet which combine, replicate and modify 2 surveys done by Sau et. al, (2014) and Wong and Lee (2017) who examined the issues of parental self-efficacy in controlling and monitoring technology. Estimated to be organized in December 2018 this research will also consist of a survey and a total of 12 tape-recorded semi-structured interviews with children and parents to discover how often children encounter disturbing or harmful content on the web and what kind of prevention and solutions made by parents.
