Abstract

Now a day there is explosive growth in number of images available on the web. Among the different images celebrities images are also available in large amount which are in the form of posters, photographs and images taken at different events. Celebrities related queries are ranking high. Most of the end users are more interested in celebrity’s related data and images. To better serve the end user demand we are going to develop an application which will
provide celebrities information when an image is given as input.
