Abstract

Security of mobile ad hoc networks is more challenging task due to its complex properties. In mobile ad hoc networks, intrusion detection system is known as the second line of defense because prevention based techniques are not a good solution for ad hoc networks due to its complex characteristics. For the security point of view, many intrusion detection systems have been proposed to mobile ad hoc networks in literature. This paper analyzed the proposed fuzzy logic based intrusion detection systems in mobile ad hoc networks.
FIDSM: Fuzzy Logic based Intrusion Detection Systems in Mobile Ad Hoc Networks
