Abstract

The packet loss and packet delay are the measure performance parameter for evaluating the network topologies in Interconnection Network design. This paper, evaluates the performance of packet loss on two different interconnection networks, Mesh and Torus, with source routing. But here the main emphasis is on the packet transmission delay on both networks. The simulation framework designed and simulated for these networks using NS2 and evaluates the
latency in both networks and results shown in the paper. The results analyzed, which are useful for designing the interconnection networks.
